

KEYTEC POLYPIPE Sustainable Drainage Systems Selection and Design

OVERVIEW:

Polypipe offers the widest range of products and solutions for sustainable drainage applications and are best placed to provide standalone or bespoke integrated solutions for any project.

Part of the overall Polypipe Civils and Infrastructure business, the Polypipe water management solutions team includes some of the most talented Civil Engineers and water management specialists within the industry to provide dedicated knowledge, support and technical expertise for a wide range of sustainable drainage systems (SUDS) and water management projects.

Polypipe is leading the way in engineered sustainable drainage solutions for residential, commercial and infrastructure applications. By remaining at the forefront of industry developments and changes to ever demanding legislation, Polypipe's team offers unbiased advice and support alongside market leading products to comply with modern regulations and overcome difficult site constraints.

Polypipe are totally dedicated to focusing on the legislative drivers and industry developments in order to provide innovative, future proof sustainable water management solutions to its customers and the UK construction industry.
